

AMENDMENTS TO THE CLAIMS

1. (Currently Amended) A contents inspecting system for inspecting contents accumulated in a server and consisting of at least HTML (hypertext markup language) data by means of a terminal apparatus, comprising:

a server having storage means for storing: ~~(a) said contents in which a, said contents having associated therewith~~ voice data for explaining an outline of said contents, and ~~(b) an exclusive tag for specifying that indicates that said voice data are described is present,~~ and

a terminal apparatus having[[;]]:

determination means for determining whether or not said exclusive tag in the contents read from said server exists,

means for downloading [[a]] voice data corresponding to said exclusive tag from said server when it is determined [[in]] by said determination means that said exclusive tag exists, and[[;]]

means for regenerating and outputting said voice data in response to said exclusive tag during regeneration of said contents.

2. (Currently Amended) [[A]] ~~The~~ contents inspecting system recited in claim 1, ~~characterized in that wherein~~ only a part of the voice data[[,]] ~~which depends on said contents, is downloaded from said server[[,]] and is dedicated to explanation of said contents,~~ other voice data information, for [[a]] wide use, [[is]] being loaded in said terminal apparatus in advance as [[a]] common voice data.

3. (Currently Amended) ~~[[A]]~~ ~~The~~ contents inspecting system recited in claim 2, ~~characterized in that wherein~~ the system includes means for accumulating said downloaded voice data and means for accumulating said common voice data in advance.

4. (Currently Amended) A contents inspecting method of inspecting contents accumulated in a server and consisting of at least HTML (hypertext markup language) data by means of a terminal apparatus, ~~characterized in that contents~~ in which ~~[[a]]~~ ~~said contents~~, voice data for explaining an outline of said contents, and an exclusive tag ~~for specifying that indicates that~~ said voice data ~~are described is present~~, are stored in said server, and said terminal apparatus ~~has~~ is operable to execute steps of determining whether or not said exclusive tag in the contents read from said server exists, downloading ~~[[a]]~~ voice data corresponding to said exclusive tag from said server when it is determined at said determining step that said exclusive tag exists, and regenerating and outputting said voice data in response to said exclusive tag during regeneration of said contents.

5. (Currently Amended) ~~[[A]]~~ ~~The~~ contents inspecting method recited in claim 4, ~~characterized in that wherein~~ only a part of the voice data~~[[,]]~~ ~~which depends on said contents,~~ is downloaded from said server~~[[,]]~~ and is dedicated to said contents, other voice data information, for ~~[[a]]~~ wide use, ~~[[is]]~~ being loaded in said terminal apparatus in advance as ~~[[a]]~~ common voice data.

6. (Currently Amended) ~~[[A]]~~ ~~The~~ contents inspecting method recited in claim 5, ~~characterized in that wherein~~ said downloaded voice data is accumulated in first accumulation means and said common voice data is accumulated in second accumulation means in advance.
